Art Unit: 2854

The present national stage application lacks unity of invention under 37 CFR 1.475:

Group I. Claims 11, drawn to a method of operating a doctor blade chamber device, classified in class 101, subclass 485.

Group II. Claims 12-20, drawn to a printing unit, classified in class 101, subclass 147.

The inventions are distinct, each from the other because:

The claims of these two groups are directed to different inventions which are not linked to form a single general concept. The claims in the different groups do not have in common the same or corresponding "special technical features". In particular, the method of Group I requires shifting the doctor blade chamber device between first and second positions for transferring ink or damp while the printing unit as recited in Group II requires a doctor blade chamber device for transferring lacquer or water and such doctor blade chamber device is not at all required to be structurally shiftable between two positions as recited in group I.

Applicant is advised that the response to this lack of unity of invention requirement to be complete must include an election of the invention to be examined even though the requirement be traversed(37 CFR 1.143). See MPEP 1893.03(d).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Ren Yan whose telephone number is (703) 308-0978. The examiner can normally be reached on weekdays from 8:30AM to 5:00PM.
